ONLINE FEE PAYMENT SYSTEM

Abstract :

Online fee payment system provides sophisticated and secure payment solution for educational institutions to collect and manage fee transactions. It also helps students to pay their college fees and exam fees without visiting college. And helps for management to pay salary for staff through online. Admin can generate various fee structures and fees receipt, also send instant alert to parents in case fee dues. The student has to enter their email-id and OTP code will be sent to student mail. The verification will be done by admin, then student will be able to pay their fee. The main advantage for management is they can keep track about all bank transaction about staff salary and student fees.

Introduction :

This project is created to provide "safe, reliable, efficient and affordable" services for students and staff of the **C.S.I. College of Commerce, Dharwad**. This idea would help the user in better way. As per the previous method the user had to do each and every process manually, but this system helps user to make fee payment bit easier because majorities of the people these days avoid paying in hard cash and prefer much more secure and instant modes of payment. The user can take printout of fee receipt from their mail-id. In this fee receipt, all details about student such as candidate name, register number, date, course details (name, semester), receipt number and paid amount. Admin will be aware of fee status of all the students and get the details about the students who have not yet paid full fee payment and admin can send email to those students who have not paid full payment. As we are also providing exam fee payment method in this project to help students to make payment quickly so we can reduce the rush at college which helps college management. It is help full for management to maintain students details in the database so they avoid maintenance of register books and files. And they can also get fee status of a particular student by searching their registration number. It also saves the time of the user for visiting to the bank (for withdrawal or deposit of cash). For management it will be help full for making staff payment. Only the management or admin can see the details of students and staff. But students can check only fee status and pay the fees (also exam fees).

ONLINE FEE PAYMENT SYSTEM

Feasibility Study:

- **Existing System:**

In existing system user has to carry out each process manually for making college/exam fees payment. The user has to visit college and wait in queue to make payment. In case of exam fee he/she has to take exam form manually and has to wait in queue for submission which can create rush in the college campus. Student has to submit all the documents xerox and paste a photo on exam form and staff has to verify all documents manually and receive the exam form from students which is lengthy process. It is overhead for the staff to collect and maintain student details.

Disadvantages :

- It is time consuming.
- Retrieval of data takes lot of time.
- It creates lot disturbances in college campus.
- Student can miss the class by giving reason of fee payment.

- **Proposed System:**

Online fee payment system, in this system there are two parts one is admin part and other is user part(students). In admin part admin can see all transaction related to student fees & staff salary. Only admin will be able to add, delete or update students details related fees. And admin can send mails to students. And he can see the list of students who had not made full payment of fees. And admin can add directly salary to the staff account. In another part that is student or user part they can make only fee payment and see their fee status. They are not allowed to make any changes.

For student /parents to make payment first he/she should visit the site they enter mail-id click on send OTP. And admin will verify the students details and send OTP code to student mail. The next step is to select course details (BCA/ B.COM/ M.COM) and year (I/ II/ III) in which the student is studying. User will enter to the page where we provided two options (College fee and Exam fee).

ONLINE FEE PAYMENT SYSTEM

User has to select one option either college fee or exam fee. If user click on college fee he/she will enter into the page where student details are displayed (name, register number, date of birth) and they have to fill the phone number or email-id for the purpose of verification (admin will send the message wither the payment was successful or not). Add amount that there are willing to pay click on make payment button. Else he/she click on exam fees they are enter to the page where user has to enter their register number and click on download button to download the exam form and details has to be filled i.e. date of birth, age, subject for which student will appear for exam and upload the passport size photo, marks card photocopy (SSLC, PUC, degree marks cards) and ADHAR card copy then add amount (as per instructions mentioned) and click on make payment. On clicking this button they will be moved to page where they can select payment methods like credit card, debit card/ATM pin or UPI.

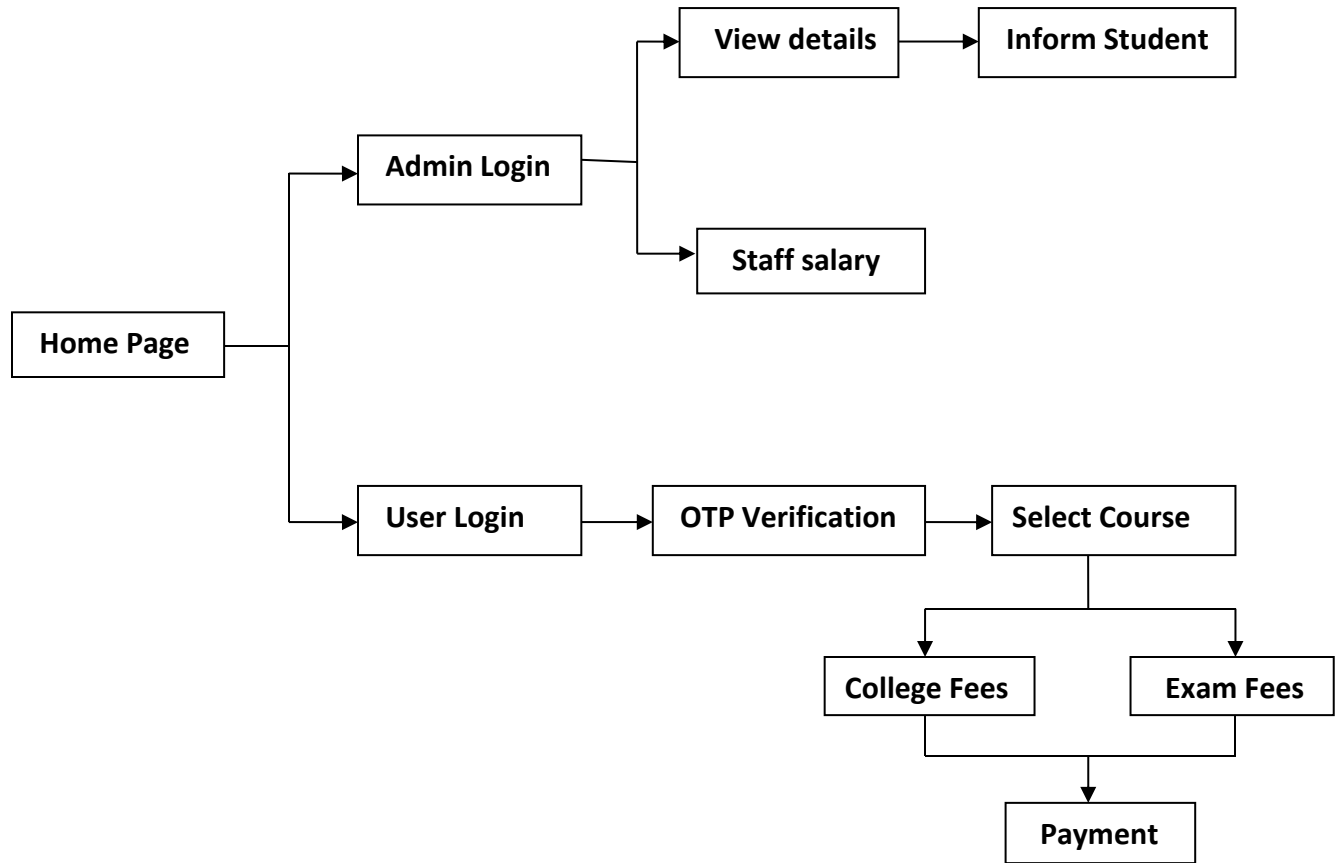

After selecting payment method one need to add required details for example if selected method is debit card or credit card they had to add card details card holder name and click on make payment then they will receive the OTP from respective banks enter OTP and complete the payment. After completing payment student can take printout of receipt. Receipt contains details about student i.e. register number, name, course details and paid amount.

Features :

- To provide huge maintenance of records.
- Flexibility of transaction can be completed on time.
- To provide easy and secure payment for exam and college fee.
- To provide easy reference for staff and students.

ONLINE FEE PAYMENT SYSTEM

System Architecture:

System Requirements :

•Software Requirements:

Front End : HTML

Back End : MySQL

Server :

Browser : Google chrome, Internet Explorer

ONLINE FEE PAYMENT SYSTEM

- **Hardware Requirements:**

Operating System : Windows

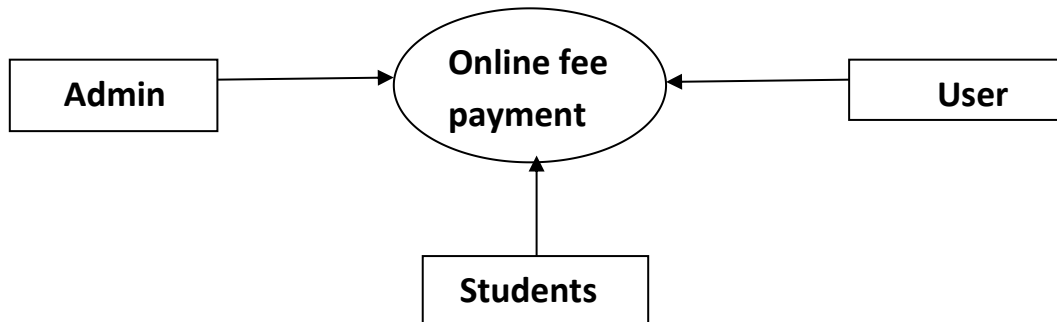

Processor : intel core i3

RAM : 4GB

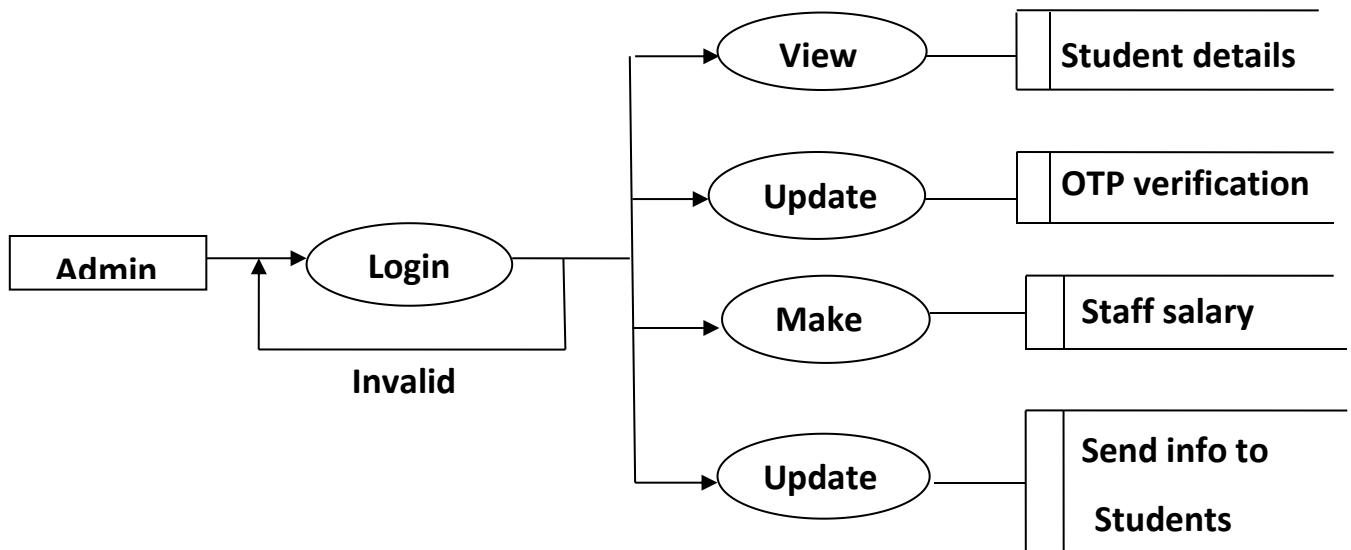

Hard Disk : 120GB and above

System Bus : 64bits

DFD:

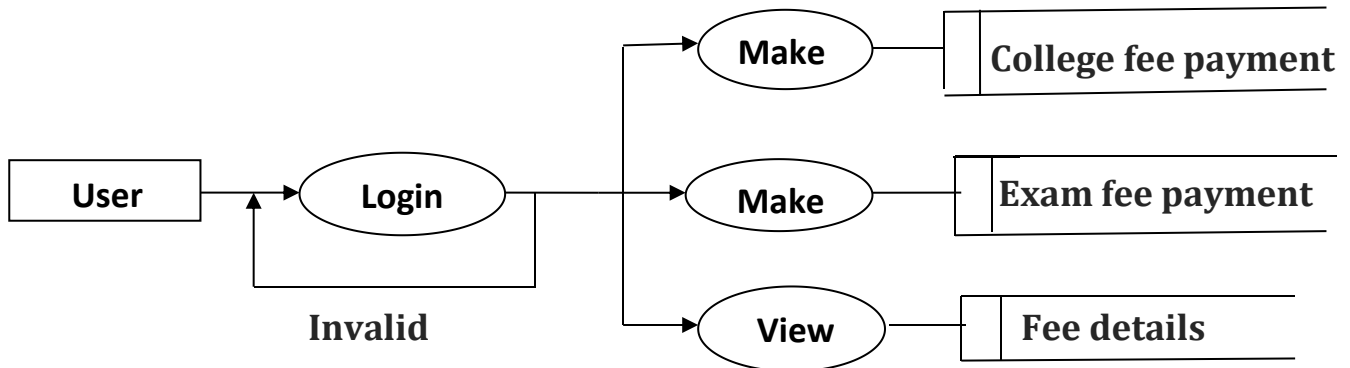

Admin:

ONLINE FEE PAYMENT SYSTEM

User:

Conclusion :

The conclusion of the project is to provide user to make "**Online Payment**" of college/exam fees and also to pay salary for the staff .It provides secure and safe payment .Admin can see all the transaction related to college fees, exam fees and staff salary in one view. Advantage is we have not fixed amount to be paid user can pay the fees in installment. Admin can easily get student list who have not paid fees. Admin can send message/inform the students to make payment on time.
